Inverness Trunk Relief Road

Watching Brief on Site Investigation

Client	The Highland Council
Date (revision)	8 October 2008
Report No.	HAS081001
Project	HAS/ITL08
Authors	Brendan Malone and John Wood

Contents

Acknowledgements

Highland Archaeology Services would like to thank the Highland Council for commissioning the work, and David Abbott of Scott Wilson, Consulting Engineers, and Steven Houghton of Soil Mechanics for their assistance. Field survey was undertaken by Brendan Malone and John Wood. Mapping is reproduced by permission of the Ordnance Survey under the Company's licence No.100043217.

Summary

An archaeological watching brief was carried out by Highland Archaeology Services on behalf of the Highland Council between 3rd and 24th June 2008 around the south side of Inverness along the proposed route of the new Inverness Trunk Relief Road. The purpose was to identify and record any archaeological features or finds revealed by the excavations for a series of Bore Holes (B.H.) and Trial Pits (T.P.) along the proposed route. There were no archaeological finds or deposits at this stage of excavation but it is recommended that a watching brief is carried out during any further excavations along the route as these initial excavations account for a very small percentage of the overall project.

Introduction

An archaeological watching brief was undertaken during site investigation works for a proposed new dual carriageway relief road to run east – west around the south side of Inverness. This road is intended to leave the present A96 Inverness to Aberdeen road west of the present retail park, and run south of the business and retail park to Inshes, where it is planned to intersect with the A9. It then follows the line of the existing Sir Walter Scott Way before crossing the River Ness and the Caledonian Canal at Bught Park to join the A82 Inverness to Fort William road.

The works observed included boreholes and test pits to test the geology. These all had a very limited footprint. Given the type of archaeology commonly found in the areas affected, which consists largely of evidence of scattered pits of different dates, showing in the subsoil, it is not surprising that little could be seen. The pits also only account for a very small percentage of the area to be uncovered by the eventual road scheme.

This report sets out the conditions, methods of excavation and findings in each Test Pit and Bore Hole.

Site Location

Figure 1: Site Location

Site Context and Background

Inverness has been a centre of political and religious importance since at least the later Iron Age (c.2,600-1,500 years ago). It has a strategically important location at the mouth of the River Ness, where the main communication routes east-west and north-south cross. In particular it commands the entrance to the Great Glen which offers a passage through Scotland from coast to coast. The hillfort on Craig Phadraig is one of several forts that take advantage of this situation. Pictish artefacts were found there during excavations in the 1970s and it may be the site where St Columba was received by the Pictish king Bridei (or Brude) in the 7th c.

Inverness has been a natural trading centre at least since its foundation as a Royal burgh, and although it never grew to the size of Perth or Aberdeen it was always important in Highland terms, effectively forming an outpost of royal power in the north and a base for its expansion north and west.

The present city owes its foundation to a charter of David I granting the status of a Royal burgh in 13th c. This was probably on the site of, or close to, an existing settlement although no firm evidence has yet been found. Inverness Castle may have been founded at the same time, and from parallels elsewhere it seems likely to be on the site of an existing stronghold. The medieval town lay along Church Street, running from the castle to the Old High Church at the western end. The Town Ditch forming the northern boundary ran along the north side of Academy Street; the southern boundary was the river. The new road is intended to relieve traffic pressure in this historic core. The road line itself cuts through the former town fields, where ploughing took place for centuries before 20th c. and 21st c. urban expansion. This has truncated, but not entirely destroyed, evidence of occupation and settlement from the advent of farming some 6000 years ago up to the present.

Two very significant Iron Age settlements have been found in recent years close to the route of the proposed new road, and during the construction of the Inverness Retail park a major Bronze Age burial was discovered. There is therefore a high potential for archaeology along this route.

The Caledonian Canal opened in 1822 with its northern terminus in a sea-lock at Clashnaharry, giving direct access to the west coast for smaller ships. The new road will cross this close to the Bught.

Methods and Results

Desk-based assessment

As part of this assessment the test pit and borehole locations were checked against the on-line National Monuments Record of Scotland (NMRS) as well as the Highland Historic Environment Record. This included a check of the RAF vertical aerial photographs taken between 1945 and 1955, and historic OS mapping. The on-line historic map archive provided by the National Library of Scotland was also consulted. See Bibliography below for further sources.

The new road will run through areas where significant prehistoric archaeology has been found. For example, the Raigmore / Beechwood / Inshes area has produced Neolithic Beakers and stone implements (HHER MHG3674 as well as Bronze and Iron Age evidence. A pit circle noted from aerial photography at Ashton farm Cottages has been scheduled as an ancient monument. (HHER MHG3684) ; while Bronze and Iron Age settlement evidence was discovered in the Balloan / Castle heather area HHER MHG3081; MHG3088; MHG3096; MHG3772; MHG45674;MHG45675). Nearby, at Glendruidh, a possible neolithic building was recorded (HHER MHG4330). At Culduthel and Knocknagael, Bronze Age cist burials have been noted (e.g HHER MHG3779; MHG3782; MHG40902) and at Culduthel farm, a major Iron Age settlement and metal-working site has been identified (HHER MHG49950).

However the above archaeology survives mainly in truncated form as a result of ploughing over many centuries. When the existing Southern Distributor Road (Sir Walter Scott Way) was under construction, it became clear that much of the evidence consists of isolated pits of various dates, often containing little or no datable material. The present exercise monitored only the test pits and bore hole sites required for engineering purposes.

Watching brief

Bore Holes (B.H.):

Measurements: Length x Width x Depth

B.H. 101: 24/06/2008
0.4m x 0.4m x 0.3m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 102: 24/06/2008
0.4m x 0.4m x 0.25m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 103: 07/06/2008
0.4m x 0.4m x 0.5m
Conditions sunny and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 104: 24/06/2008
0.4m x 0.4m x 0.5m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 106: 24/06/2008
0.4m x 0.4m x 0.5m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 108: 24/06/2008
0.35m x 0.35m x 0.4m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 110: 24/06/2008
0.4m x 0.4m x 0.6m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 111: 24/06/2008
0.4m x 0.4m x 0.35m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 113: 24/06/2008
0.35m x 0.35m x 0.4m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 114: 24/06/2008
0.3m x 0.3m x 0.35m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 116: 24/06/2008
0.35m x 0.35m x 0.5m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 118: 16/06/2008
0.45m x 0.3m x 0.6m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 119: 16/06/2008
0.35m x 0.35m x 0.45m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 121:16/06/2008
0.4m x 0.4m x 0.35
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 123: 16/06/2008
0.4m x 0.4m x 0.25m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 124:16/06/2008
0.4m x 0.4m x 0.35m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 501: 05/06/2008
0.55m x 0.55m x 0.38m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 503: 03/06/2008
0.5m x 0.5m x 0.45m
Conditions sunny and dry.
Methods: Excavated by hand, with shovel and trowel. Measured and photographed.
Nothing of archaeological significance found.

B.H. 507: 24/06/2008
0.35m x 0.35m x 0.45m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 508: 24/06/2008
0.4m x 0.4m x 0.5m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 509: 24/06/2008
0.35m x 0.35m x 0.2m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 512: 24/06/2008
0.4m x 0.4m x 0.6m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 513: 24/06/2008
0.4m x 0.4m x 0.25m
Conditions overcast and dry.
Methods: Excavated by hand, with shovel and trowel.
Nothing of archaeological significance found.

B.H. 516: 03/06/2008
0.6m x 0.6m x 0.5m
Conditions sunny and dry.
Methods: Excavated by hand, with shovel and trowel. Measured and photographed
Nothing of archaeological significance found.

B.H. 517: 03/06/2008
0.35m x 0.35m x 0.55m
Conditions sunny and dry.
Methods: Excavated by hand, with shovel and trowel. Measured and photographed
Nothing of archaeological significance found.

Test Pits (T.P.):

Measurements: Length x Width x Depth

T.P. 201: 12/06/2008

3m x 0.5m x 0.15m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 201 (A): 12/06/2008
1m x 0.25m x 0.15m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 202: 17/06/2008
3m x 1.5m x 0.5m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 203: 17/06/2008
3m x 1.5m x 0.4m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 205: 17/06/2008
3m x 1.5m x 0.4m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 207: 12/06/2008
4m x 0.5m x 0.3m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 207 (A): 12/06/2008
1m x 0.35m x 0.3m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 209: 17/06/2008
3m x 1.5m x 0.7m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 212: 12/06/2008
5m x 0.5m x 0.35
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed. Redeposited natural, glass bottle at 2m deep also wood and grass up to 3.5m deep probable fill to build up road for bridge over nearby burn.
Nothing of archaeological significance found.

T.P. 212 (A): 12/06/2008
1.5m x 0.3m x 0.5m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed. Redeposited natural, glass bottle at 2m deep also wood and grass up to 3.5m deep probable fill to build up road for bridge over nearby burn.
Nothing of archaeological significance found.

T.P. 213: 12/06/2008
4m x 0.5m x 0.4m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 213 (A): 12/06/2008
1m x 0.4m x 0.4m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 401: 11/06/2008
3.5m x 0.5m x 0.5m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 401 (A): 11/06/2008
2m x 0.4m x 0.5m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 402: 12/06/2008
3m x 1m x 1.2m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, stopped at 1.2m depth due to services, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 402 (A): 12/06/2008
1.5m x 0.4m x 1.2m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, stopped at 1.2m depth due to services, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 404: 12/06/2008
3m x 0.4m x 1m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 404 (A): 12/06/2008
1.5m x 0.4m x 0.95m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 406: 12/06/2008
3m x 0.45m x 0.8m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 406 (A): 12/06/2008
1m x 0.35m x 0.3m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 408: 17/06/2008
3.5m x 1.5m x 0.55m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 602: 11/06/2008
5m x 1.5m x 0.35
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 602 (A): 11/06/2008
1.5m x 0.35m x 0.45.
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 606: 11/06/2008
5m x 1.5m x 0.45m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 1.5m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 606 (A): 11/06/2008
1.5m x 0.45m x 0.45m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 608: 17/06/2008
4m x 1m x 0.25m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 610: 11/06/2008
2.5m x 0.5m x 0.9m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

T.P. 610 (A): 11/06/2008
1.7m x 0.4m x 0.9m
Conditions overcast and dry.
Methods: Excavated with mechanical back acting digger with 0.25m flat edged bucket, investigated, measured and photographed.
Nothing of archaeological significance found.

Recommendations

Although the watching brief did not reveal any archaeological features or finds, this is almost certainly because of the small areas opened. The line of the proposed road has considerable archaeological potential and a watching brief should be maintained on any site clearance and other excavation works.
